	CEP152, also named as KIAA0912, is a regulator of genomic integrity and cellular response to DNA damage acting through ATR-mediated checkpoint signaling. It is necessary for centrosome duplication. CEP152 functions as a molecular scaffold facilitating the interaction of PLK4 and CENPJ, two molecules involved in centriole formation. CEP152, ATR and CENPJ control cellular responses to DNA damage. CEP152 has some isoforms with MW 189 kDa, 152 kDa, 110 kDa and 66 kDa.
