Background

ATP1A3 participates in the catalytic hydrolysis of ATP and the exchanging of sodium and potassium ions across plasma membrane. The catalytic activity mode is $ATP + H_2O + Na^+(In) + K^+(Out) = ADP + phosphate + Na^+(Out) + K^+(In)$. It has been published that the neurologic disorders rapid-onset dystonia-parkinsonism (RDP), alternating hemiplegia of childhood (ACH) and CAPOS syndrome (cerebellar ataxia, areflexia, pes cavus, optic atrophy and sensorineural hearing loss) are all related with the mutation of ATP1A3. There are other reports suggest that early life epilepsy and episodic apnea revealing are potentially associated with the mutation of ATP1A3 as a result of impairment of Na/K homeostasis. Primary antibody in this kit is generated against the C-terminal region (665-1013aa) of ATP1A3.

Synonyms

ATP1A3, ATP1A3 (C-terminal), DYT12, RDP, Sodium pump subunit alpha 3
